SUMMARY

Backend engineer with 4.5 years designing and shipping production systems end-to-end. Built Hyper-Y from scratch as lead engineer at AVRl: a freight pricing engine processing **100+ requests/sec** across **8 enterprise TMS integrations** on GCP. Works across Python, Node.js, event-driven architecture, PostgreSQL, MongoDB, and Redis.

TECHNICAL SKILLS

Languages: Python, JavaScript, Node.js, TypeScript
Backend: Flask, Express.js, Event-Driven (Cloud Tasks + GAE Workers)
Databases: PostgreSQL, MongoDB, Redis
Cloud & DevOps: GCP, Google App Engine, Google Cloud Storage, Cloud Run, Docker, GitHub Actions, CI/CD
Frontend: React.js, Next.js

EXPERIENCE

AVRl Austin, Texas, USA (Remote)
Senior SDE - Hyper-Y Jan 2024 - Present

- Designed and built Hyper-Y from scratch (reporting directly to CTO): a freight pricing engine processing **100+ requests/sec** across **8 enterprise TMS integrations** (BlueYonder, MercuryGate, Navisphere, UberFreight, E2Open) on GCP with Redis caching and PostgreSQL.
- Architected a multi-stage event-driven pipeline covering bid eligibility evaluation, dynamic rate calculation, and premium adjustments; configuration-driven design enabled rule changes across **10+ carrier setups** without modifying the codebase or triggering a deployment.
- Deployed on Google App Engine with Docker-based builds and GitHub Actions CI/CD; built the auth service and a structured logging pipeline capturing all bid decisions to Firestore.

AVRl Austin, Texas, USA (Remote)
RPA Automation Engineer Nov 2021 - Dec 2023

- Engineered 100+ RPA bots deployed on customer-dedicated VMs via AVRl FIT (Electron app), automating end-to-end carrier bidding across **20 TMS platforms**: bots parsed TMS interfaces, extracted shipment data, routed it through AVRl's pricing APIs, and placed bids autonomously, processing **1,000+ loads per customer per day**.
- Reduced per-bid processing time from **15 minutes (manual) to under 30 seconds**; owned the team's most complex, highest-volume TMS integrations.

ADDITIONAL EXPERIENCE

Freelance / Contract Upwork · 3eco Systems (Remote)
Lead Full-Stack Developer

- Led development of an Instagram analytics SaaS (Next.js, TypeScript, Supabase, Inngest) for a US client; system tracks accounts with **up to 1M followers** across **1,000 active users**.
- Tech lead for **3eco Systems** (Series A, \$17M, EV last-mile logistics serving Amazon, Flipkart, and BigBasket); led engineering across their Node.js/Express backend, MongoDB, web frontend, and Flutter mobile app.

PROJECTS

business-os npmjs.com/package/business-os
Published npm CLI - Node.js, AI Agent Workflows 2026

- Built and published a Node.js CLI to npm that scaffolds reusable workflow files for AI coding agents (Claude Code, Codex); interactive installer supports dynamic profile selection (SaaS, D2C, partner rollout) and post-install **doctor/update** lifecycle commands.

EDUCATION

Master of Computer Applications (MCA) 2022
MIT World Peace University, Pune, India GPA: 9.6/10.0
